

Интеграция с Kafka и подводные камни

- Развернул кафку и CH в докере.
- Создал таблицы и мв:

```
CREATE TABLE test
(
  `message` String
)
ENGINE = Kafka('192.168.31.189:9092', 'topic', 'group1',
'JSONEachRow');
```

```
CREATE TABLE target
(
  `message` String
)
ENGINE = MergeTree
ORDER BY message;
```

```
CREATE MATERIALIZED VIEW test_mv TO target
AS SELECT message
FROM test;
```

```
insert into test values ('test');
```

```
SELECT *
FROM target
```

```
1.  message
    test
```
